

In the Claims:

Please amend the claims as follows:

1 15. (Currently Amended) A wall unit form and a wall unit comprising:

2 a first surface, formed by an interior surface of a first wall panel;

3 a second surface operatively attached to said first surface, said second surface formed

4 by an interior surface of a second wall panel;

5 end surfaces operatively attached to said first and second surfaces thereby forming an

6 upright form and opposing sides, said end surfaces formed by interior surfaces of end wall

7 panels;

8 wherein at least one of said first, second and end surfaces simultancously provides

9 only horizontal supports to a plurality of layers of discrete components during ,but not prior

10 to, a single pour application of a binding material to the wall unit form, thereby forming at

11 least one wall unit having a substantially vertical surface of said plurality of layers of

12 discrete components; and

13 further wherein at least of one of said first, second and end surfaces is shaped

14 configured to be removably attached from one another to facilitate entry into a volume

defined by the upright form, said entry being during placement of said discrete components.

1 16. (Previously Amended) The wall unit form and wall unit of claim 15, wherein at least

2 one of the first surface, the second surface, and the end surfaces, is characterized by a

3 nonrectangular aspect.

Serial No.: 10/661,445

2

1 17. (Previously Amended) The wall unit form and wall unit of claim 15, wherein at least
2 one of the first surface, the second surface, and the end surfaces, is characterized by
3 curvilinear edges.

1 18. (Previously Amended) The wall unit form and wall unit of claim 15, further
2 including said second and said end surfaces being hingedly attached to said first surface.

1 19. (Previously Amended) The wall unit form and wall unit of claim 15, further
2 including a volume which will produce an integral footing when filled.

1 20. (Previously Amended) The wall unit form and wall unit of claim 15, further
2 including a pocket structure operatively attached to at least one of said surfaces.

1 21. (Previously Amended) The wall unit form and wall unit of claim 19, further
2 including an integral-footing-producing volume having radiused corners.
